Crack Seal Proposal

The continued maintenance of our road infrastructure remains one of the key priorities for the community. Beginning 6 years ago the Town engaged Pavement Solutions to provide crack sealing, slurry sealing, and micro fiber sealing at various locations.

This has helped delay the full replacement and overlay of streets in the town and has allowed us to focus on replacing the streets that are in dire need of repair. In addition it is more cost effective as part of an entire strategy to street maintenance. I've attached a pdf of cost comparing overlay of streets vs utilizing the various forms of pavement maintenance.

Better yet, by doing this we are staying on top of the street maintenance of the streets that were recently overlaid. Getting back to them with crack seal between 3 and 4 years after they've been resurfaced which helps prevent moisture from getting underneath and starting the chuck hole creation process.

I'm recommending that we do Nebo and CR 600 along with a portion of River Rd, Westbrook Rd/Rolling Drive and the section of Westbrook Neighborhood north the Elks golf course. All these have been resurfaced in the last 4 years and are prime candidiates for maintenance.

This will cost slightly less than $60,000 but gets us the best per square yard price. Funds from MVH and LRS will be utilized.
