Water System Control Improvements

After bringing Well 4 online in the past year, it has become obvious to our operators that communication between the wells and towers needed to be improved. While we have made minor improvements, the system that was put in the mid 90's is becoming more antiquated and difficult to repair as pieces are no longer being found without searching on used auction websites.

We asked BF&S to draft a RFP and to obtain proposals to update our communication system; we only obtained one response from Peerless Midwest. Matt Spidel and Wayne have reviewed the proposal without finding issues.

I am recommending that we would award the job to Peerless asking them to proceed as quickly as possible. Funding will come from the Water Depreciation Account.

Pete
