### **Water Department Work Vehicle**

When we made an addition to the water department employee roster, we did not add an additional work truck for the added employee as the two new members were learning the system and working together. Now that they have had time to learn and work in the system they are able to work independently so the addition of a third vehicle is key to keep the employees productive.

We have obtained quotes for a work truck with utility bed to store additional tools and water parts. The water utility has available funds in both water depreciation and operating to purchase the truck. I would recommend the lower bid.

Pete
