Liz,

I'm attaching some exterior images of the building we've been working on for your review.

As you look at these, please keep in mind that we are a little bit limited by the computer program we are using in replicating life-like materials. The brick shown is not really the color of your brick, and the "wood" siding shown is probably not really the color or dimension you will see in real life. In reality, we are thinking of using a cement board type of siding in combination with the brick. This siding is very durable and can come in virtually any color – like the "cedar" look I'm trying to show in the drawing, or any color we can imagine.

The "awning" over some of the windows we see as a wood/metal type of sun shade – imagine a smaller, and less residential form of a pergola.

I'm working on interior images for you to use as well, but we'd like to get your feedback on these before I get too deep. J

Thanks,

Heather
