Note: The purchase of a telehandler would replace two older pieces of equipment, a 2006 John Deere tractor with a frontend loader and an early 1990's Case backhoe that our department inherited from the Street Department when they purchased a new backhoe. Our treatment plant and process has grown significantly over the last couple of decades and the John Deere is incapable of handling the heavy loads we now require. We have modified the Case backhoe to lift heavy chemical tanks but it is aging out and needs frequent costly repairs. Additionally, a telehandler would give us added safety allowing us to work at elevated heights without the use of long ladders. The above quoted telehandlers meet our lifting height and lifting weight requirements and the ability to attach and operate the following attachments that are included in each quote. These attachments are forks, personnel basket, material bucket, grapple bucket and lifting winch.

The Wastewater Department is requesting approval to purchase Listed Item #4 (Skytrak brand, model 6042) for \$143,116.00
