Waste Water Treatment Plant Improvements Contractor

The Town has been working with BF&S to create a plan for improvements at the WWTP including, phosphorus removal, headworks improvements which will provide some growth opportunity, repair and maintenance of primary and secondary clarifiers, a chemical contact building and sludge press. The process that we will be utilizing is the Guaranteed Maximum Contract procedure which the town has used previously in extending waste water pipes to park 1.

Alan, George and I with help from Matt Spidel interviewed and score sheeted 3 possible providers, Thieneman Construction, Kukosing Construction, and Bowen Construction. Review of each of the contracting company's shows that they are all qualified and have performed similar work throughout the state. After the interviews tabulations of the score sheets showed that Thieneman was the preferred contractor of choice.

Matt has provided a recommendation letter that should the council adopt allows Thieneman along with the Town to take the next steps in working through the GSC process. I recommend council approve the letter as we are legally required to make a number of these upgrades.
