Facility: Town of Yorktown, Park One
Project: Well Redevelopment and Repair
Wayne Studebaker
Water Superintendent
Town of Yorktown

NWS is pleased to provide you with this proposal for services requested on the wells at Park One.

It should be noted that this work is based on minor verbal information supplied by the installing contractor – no information provided was in written form. This includes pump set data sheets for equipment replacement or pump test data to know how the well has performed in the past.

All work is based on only taking one well out of service at a time so that service can be maintained to the system. If all work as outlined below is completed on each well it is anticipated that each well will be out of service for 4 days. Bacteria samples are the responsibility of Yorktown personnel.

Work planned is outlined below:

1. Evaluation of the current flow rates of both wells, pumps removed for inspection and verification, video inspection of the entire well to focus primarily on the screened interval, reinstallation of the pumps and return to operation.

Cost for Item 1 as outlined

\$7,600

2. Chemical rehabilitation of both wells utilizing disk surge with acid and chlorine.

Cost for Item 2 as outlined

\$20,800

3. Replacement pump systems for both wells. This will include pumps (conditions of service are estimated), motors, wire, check valve, and pipe. If the pipe currently installed is Certa-Lok PVC there will be no need to replace it so there will be a minor savings. Installation is included in Item 2 cost above as we will install either existing or new upon completion of the rehab work.

Cost for Item 3 as outlined

\$12,400

Estimate total cost for the project as outlined above is \$40,800.

Sincerely,

Phil Bonneau, CPG
